Expert LEED Energy Modelling and Sustainability | Building Consulting Service

Operations-Team | July 2023

Advance your building's energy efficiency with NetZero-Action's expert LEED Energy Modelling consulting services. Our team helps you navigate through LEED certification requirements with sophisticated building performance modelling, promoting sustainability in every project.

Building Consulting Service.

NetZero-Action offers comprehensive LEED Energy Modelling consulting services, specializing in building performance modelling for LEED. Using the ASHRAE 90.1 Performance Rating Method Appendix G, our energy

consultants expertly execute Platinum, Gold and Silver certified energy models for various building types across North and South America. With our ability to quickly analyze different versions of ASHRAE 90.1, we ensure your project stays up-to-date with the latest standards.

Our services extend beyond energy modelling. We evaluate your building design against LEED New Construction and Core & Shell, Energy and Atmosphere requirements, delivering the necessary documentation for LEED-Online. This process not only identifies your potential energy and cost savings but also sheds light on opportunities for design improvements to enhance energy efficiency.

With NetZero-Action, you benefit from our holistic sustainability analysis covering LEED Daylighting Modelling, Fundamental & Enhanced Commissioning, LEED Measurement & Verification, Code Compliance, life cycle cost, and external comfort analysis. We believe in integrating performance verification into every step of your building's design, construction, commissioning, and operation to ensure optimal energy performance.

Check All the Boxes to Success.

- ✓ Expert energy consultants Platinum, Gold and Silver LEED certifications.
- ✓ Proficiency in handling diverse building types and climate conditions across the Americas.
- ✓ Quick and easy comparisons across different versions of ASHRAE 90.1, ensuring up-to-date compliance.
- ✓ Comprehensive assessments for LEED New Construction and Core & Shell, Energy and Atmosphere requirements.

- ✓ Delivering valuable insights on energy, cost savings and design improvement opportunities.
- ✓ Offering extensive analysis options across all aspects of LEED and sustainable design.
- ✓ Integrating performance verification throughout design, construction, commissioning, and operation phases.
